Hey, we got a great response to the December issue - thanks, man. (Be sure to get your entry to the Biff & Lumpoe look-alike contest in "asap;" o.k.? It'll be a great honor for the winners.)

Oh, yeah, I've got this random thought that's been floating around in my head lately; doesn't the name "Orth" (as in 'the Dean) sound like something out of "Lord of the Rings"? It's kind of weird if you think about it, man. Really. *Stu*

# ZIG-ZAGGIN'

Return with us again to the days when Squadron Patches were cool and the short-lived 23rd Squadron "Zig-Zag Man" emblem was the coolest thing to wear on your A-Jacket. (Eat your hearts out, 11th, 16th, and 20th Squadrons!) Just another tribute to radicalism, man.

# Not Guilty Because of PMS?

PMS, as doctors call it, is still a malady in search of a firm definition. Its symptoms have been described as a potpourri of ills that range from monthly bloating and headaches to severe depression and rage.

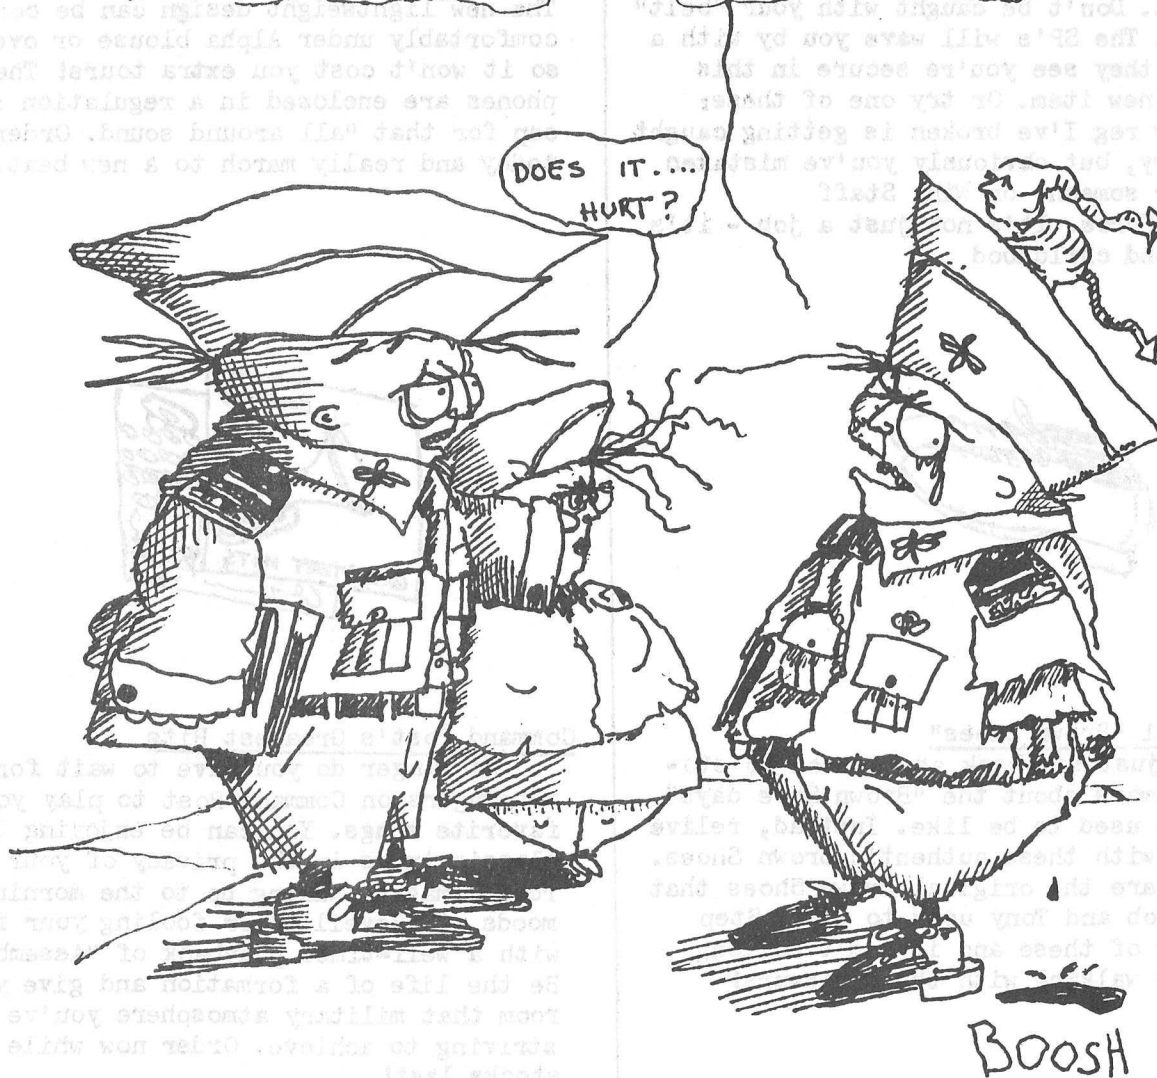

RUE  
SECTION

The PMS case is a small part of a larger debate over the limits of criminal responsibility. The law is generally quite clear: people are assumed to be accountable for their actions. The controversy comes when judges and legislators try to carve exceptions. The most obvious one is for insanity—and that defense is still reeling from the criticism that followed the acquittal of John Hinckley Jr. for shooting President Reagan.

PMS does not fit neatly into the category of a mental disease. It is much closer to what may be called physiological ex-

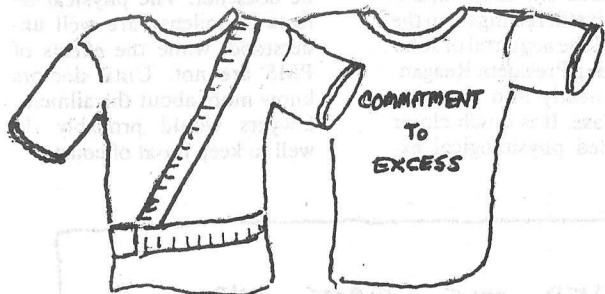

cuses for crimes. The most typical cases involve epilepsy. Should an automobile driver who suffers a seizure and runs down a pedestrian be liable for homicide? The rule of thumb: the first time, the driver has an excuse, but if it happens again, he does not. The physical effects of epilepsy are well understood, while the effects of PMS are not. Until doctors know more about the ailment, lawyers would probably do well to keep it out of court.

# A SHORT COURSE IN RADIATION CONTROL

The basic signal without sufficient screening receives unfiltered emissions from all directions. This results in total distortion and loss of reception and transmission.

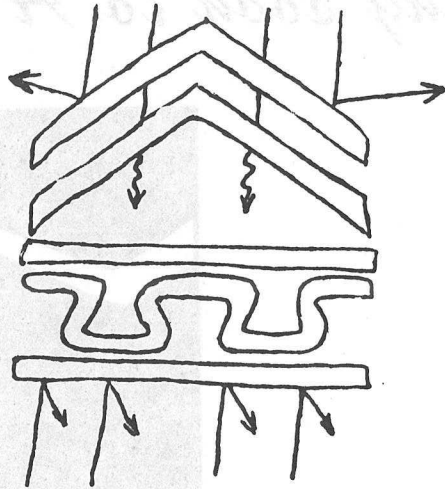

The signal with a single screen provides protection to one side, but still has no significant filtering effect.

The angular shape of the upper screen deflects many of the emissions, in addition to the lower screen. However, the total protection is still not effective or significant at this point.

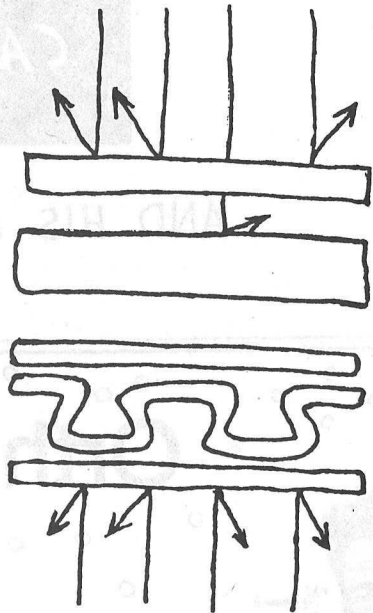

The screening effect becomes useful when at least two angular screens are placed perpendicular and between the source and the basic signal.

Finally, we see the ultimate screening device in one or more flat surfaces. Though similar to the lower screen, the upper screens are much larger and significant in their overall effect.

In the upstairs bathroom the Orths still plan to install a claw-foot tub and pull-chain toilet. They also want to convert the unfinished attic into a bedroom.

### A Bit of History

The Portuguese were the first Europeans to discover it back in the 1500s, followed by the Dutch, who killed all the dodos and named the island Mauritius, after Prince Maurice of Nassau.
