STATEMENT OF TRUTH:

We here at Dodo feel regret because we have been misleading you with regard to the staff. Actually we have no covert staff on Ac-pro. In fact, all of the staff members have major's GPAs of 3.5+. Two of our members are now competing for Rhodes Scholarships. All of us know the Commandant personally (we call him Marc) and have been to his house on several occasions for dinner.

Some other things that you might want to know about us:

- We change our shirts daily;
- don't take cereal boxes from other tables;
- go to sleep at 12;
- don't understand modern music;
- and dust the tops of our mirrors daily.

We are sorry that we promoted an appearance of condoning regulation violations and hope that with this we have cleared up any misunderstandings.

Cordially,
Your Dodo Staff

Oct	On the night of the squadron party, I provided transport to 240 Hall. We did not compromise superior-subordinate. We bought some processed grain for the engine. We hit a small boy on a tricycle and after wash the car off. No civilian clothes left headlights on and the gas knock over the drunk cop. The CIC said I was confined to quarters. -fairness.	41	96

Got a problem?
ASK THE

ESHBRICK

Dear Eshbrick,

Man, I'm having real problems with my girlfriend. Like, I just feel real uptight and stupid when I'm around her anymore. She's never home when I call her, and I feel like I'm losing her. Help me!

Confused

illiterate:

Dear ~~Confused~~,

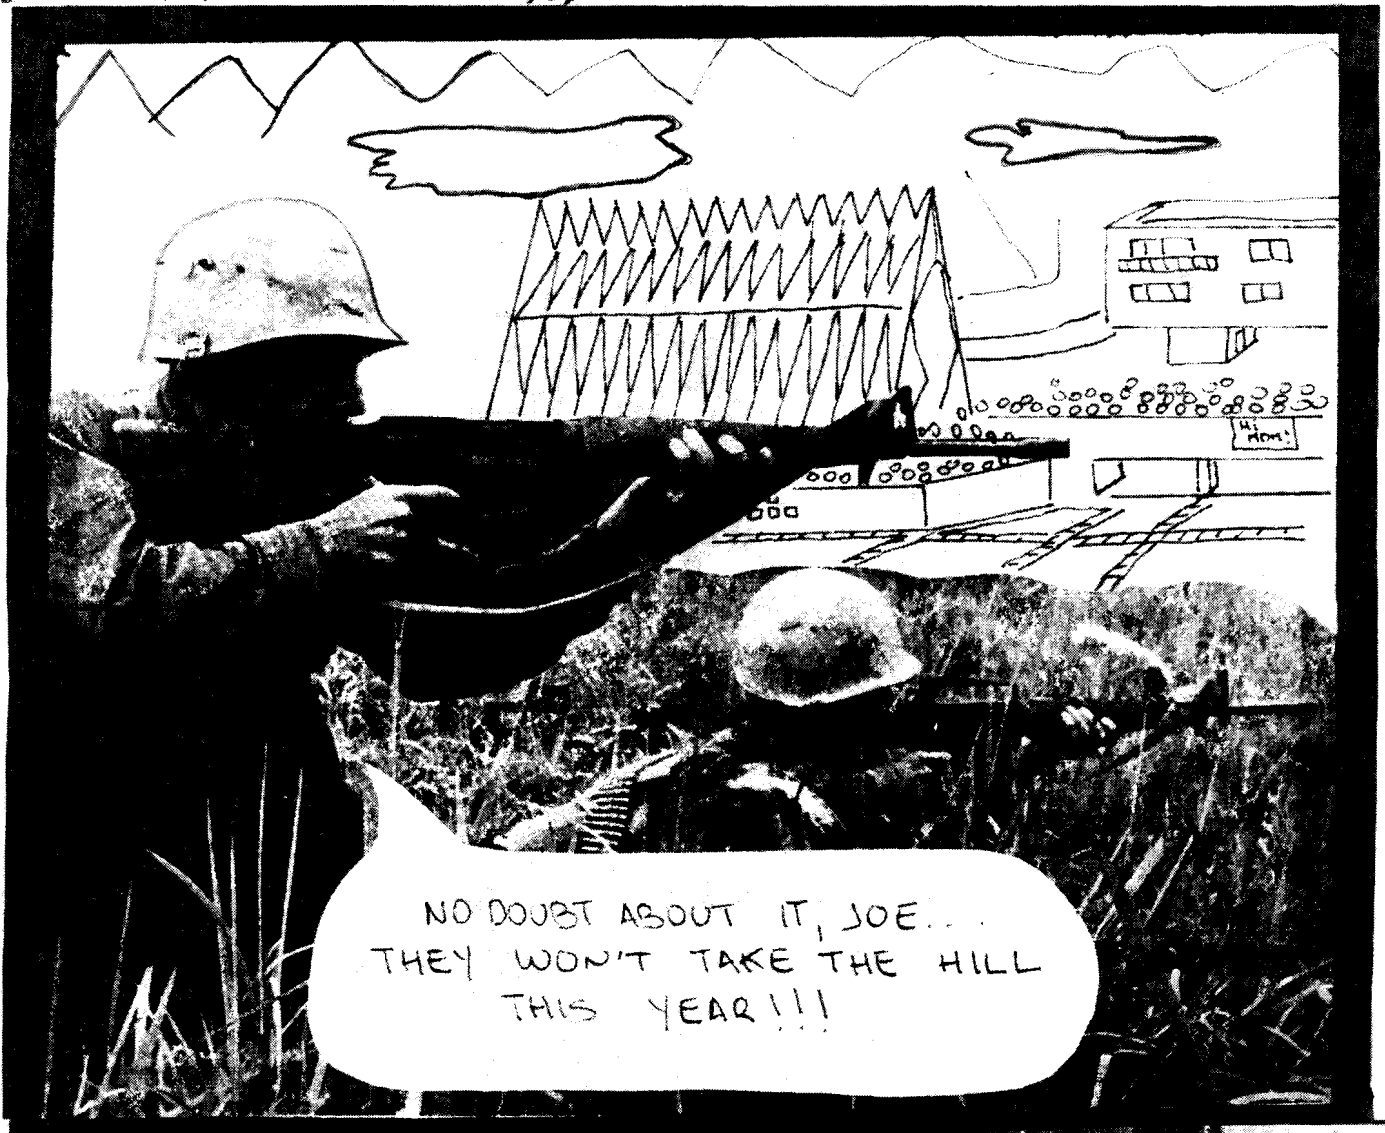

Hold thy tongue, alay thy fears, and get ahold of thyself. Your problem is a common one, readily solved by mathematical interpretation. Take thine Eshbrick and consult the Book of Total Relations, Chapter 23, Verse 686: "And the Author said unto the illiterate:

$$\frac{M}{a_0} = \frac{2}{P_{as}-1} \left\{ S_{xy} - \frac{1 + \frac{P_{as}-1}{2} M_0^2 \left[R^{(P_{as}-1)/P_{as}} - 1 \right]}{X} \right\}$$

$$\left\{ 1 - \frac{1}{\left[1 + \frac{1 + \frac{P_{as}-1}{2} M_0^2 (1 - R^{(P_{as}-1)/P_{as}})}{S_{xy} X P} \right] \left[R_{of}^{P_{as}} C_{db} \right]^{(P_{as}-1)/P_{as}} \left[1 + \frac{P_{as}-1}{2} M_0^2 \right]} \right\} "$$

- where
- M = money in your checking account
 - a₀ = total # of other female acquaintances
 - P_{as} = whether you have an OWP or not
 - M₀ = number of movies you see in one night
 - X = the rating of the movie(s) you see in one night
 - R = universal constant: "I have a headache."
 - S_{xy} = how you would rate her style of dress
 - R_{xy} = number of beers you have consumed in one night
 - R_{of} = Boolean variable: TRAINING or NOTTRAINING (Note: may cancel out P_{as} on Friday nights)
 - C_{db} = Probability determinant: whether she will dial ACC line accidentally and jokingly ask for "my husband."

Calm thyself, meathad. Your quest for inner peace lies in Eshbrick.
